

ADMISSION GOING ON

About the Course

Applied statistics includes planning for the collection of data, managing data, analysing, interpreting and drawing conclusions from data and identifying problems, solutions and opportunities using that analysis. This major builds critical thinking and problem solving skills in data analysis and empirical research. This course definitely helps the researchers to solve the practical problems in today's data-centric world. Through this they can decide what data they need to collect, determine how to collect that data and then analyse and interpret the data using statistical tools, algorithms and software.

Course outcomes: Learning basics to advanced level statistics along with the application, analysis and interpreting the sample data and project handling through the application of proper statistical software.

Who can apply: Academicians, Researchers and Working Professionals

Resource Persons: SAIARD, Renowned Universities & Corporate

Last date of application: 15 October, 2021
